## CWP's COVID-19 Response in Namibia

CWP is a leading renewable energy developer with expertise across the full project lifecycle. They develop, manage, and own projects with demonstrated success. Using their proven approach to follow each project from inception to full operation, they ensure genuine engagement with all stakeholders at each stage of development.

The mission of CWP Global is to improve the environment for current and future generations by leading the transition to renewable energy. Their projects aim to deliver long-term positive impact for the communities around them, and we always partner with the local stakeholders to ensure this objective. Transparency and engagement are critical to our success; getting the community on-board and excited about decarbonizing their towns and cities, and helping them build infrastructure which will benefit them well into the future.

CWP Global established its landmark project Tumoneni Hydrogen Energy for the development of green hydrogen and ammonia in Namibia. During the short period of CWP's presence in Namibia, they already contributed to a number of causes:

CWP Global contributed 20 000 Euro towards meeting the dire need for medical oxygen in Namibia as a result of the unprecedented spread of the COVID 19 virus. We wish to express our gratitude towards the Namibia Chamber of Commerce and Industry leading this noble initiative and are proud to be part of it. In the words of Helen Keller:

**"All the world is full of suffering. It is also full of overcoming".**

CWP Global and its partners hereby offer our heartfelt condolences to the families who lost loved ones due to this pandemic.

CWP Global also provides the seed funding of for the establishment of the Namibia Green Hydrogen Association, NamGHA, which aims to provide a common platform for dialogue between the private sector and the Government of the Republic of Namibia for the sustainable development of the industry in Namibia.
